

Richmond Industrial Machine, Inc.

Artistically shaped Biscuits, Cookies and Pet Treats molded at high speed....

The 490B Rotary Molder is the newest design molder on the market today. It is a very rugged machine with all the extras. Many years of planning and discussions with experienced operators and cookie process experts were utilized in the design of the molder. It is made with all precision machined parts and without the use of welded parts and frame that are distorted with heat when welded. This machine is powered with two 7.5 H.P. drives with separate variable speed controls. This feature allows the operator to vary the product weight slightly to eliminate waste. If you are looking for a molder that is operator friendly, easy to clean, and to maintain than please request a quotation on our 490B Molder including information on our dough feed systems.

490B ROTARY MOLDER:

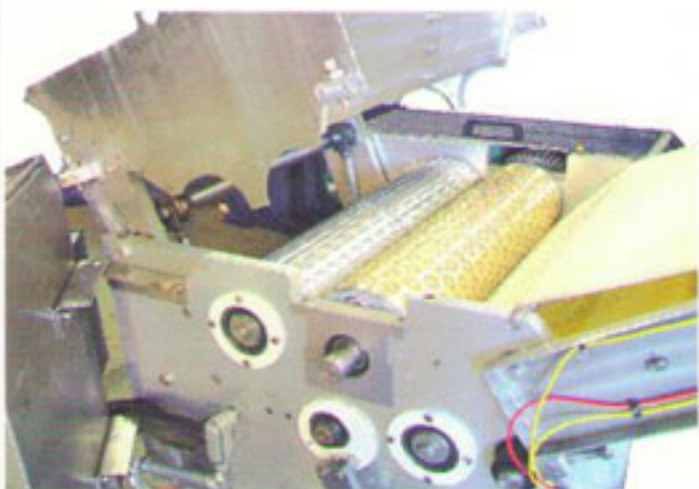

STANDARD FEATURES:

- .Dual roll drives
- .Stainless steel construction
- .Operator panel swings out
- .No chains or sprockets
